

PDQLink is a wireless internet service provider based in North Aurora, IL. We provide (in most cases) the only available source for high speed internet access to rural communities in our over 1,000 square miles of coverage area. We encourage the allowance of more power for outside wireless transmission and less power for indoor use. Allocation of the 700Mhz spectrum is vital, as many communities are unable to receive service due to dense foliage. Thank you for your consideration.
